

VertiBasic

Height adjustable frame for wall units

Ideal for residential homes or independent living projects, etc.

Perfect for larger projects

- VertiBasic is the wall unit system for kitchens where height adjustment is only required occasionally.
- It allows fast adjustment of wall units from 60 - 200cm in total.
- The frame is hidden behind the wall units at all heights.
- It is not possible for the user to adjust themselves, but one caretaker or handyman can effortlessly adjust a section of units to the height required over a 25cm range with a ROPOX Jack-up.
- Only one Jack-up is required for all VertiBasic frames and FlexiBasic (worktop), so the system is particularly suited to projects with several kitchens that may need adjustment.
- VertiBasic is a really economical solution for kitchens for residential homes or independent living projects.

VertiBasic

Frame for wall units
Item 30-60060 - 30-60200

Frame with wall units

Accessory:

Jack-up
30-63402

Frame without the Jack-up

ROPOX Tips

- The wall units should have a solid top and base.
- Allow a space of 3-5mms either side of the units for free movement.
- To line up adjacent fixed wall units, space them off the wall by 6.5cm.
- It is not necessary to remount the wall units before adjusting the height. Simply locate the Jack-up below the centre of the frame (behind the wall units), release the two locking nuts, wind to the height required and tighten the locking nuts.
- The jack-up is kept in a central place.
- 8mm bolts/ screws to suit the substrate should be used.
- Max. load on frame is 150kg.
